Education

Bachelor of Science in Computer Science, Minor in Mathematics

- San Francisco State University, 2020-2025

Experience

Robot Technician Specialist - contractor at Apple, California

Jun 2025 – present

- Automate recurring data ingestion workflows using Python, reducing manual processing time by 98% reducing from 4 hours to 5 minutes and eliminating human error through CLI execution.
- Independently developed Python video QA automation for a daily ~4-hour manual process, increasing defect detection by 20% and reducing review time to less than 1 hour.
- Designed and deployed a relational database integrated with Python services and an internal iOS application for interacting with a REST api, doubling data collection throughput.
- Served as team training point for Python based robotic tooling, debugging issues, maintaining Git workflows, and supporting Agile sprints to reduce friction in daily data collection.

Technician - Johnson Controls, California

Mar 2016 – May 2020

- Created a Java program for parsing PDF and using optical character recognition to read blueprints and automatically generate data to program fire alarm control panels reducing manual entry time by 2x.

Fire Control Technician - U.S. Navy, Virginia

Jan 2011 – Jan 2016

- Diagnosed and resolved a mission-critical failure in the Tomahawk control system by reinstalling and validating Linux systems at sea without external support, preventing months-long operational delays.

Projects

Object Detection AI Model

- Developed a PyTorch/TensorFlow project to classify COVID/Pneumonia from chest X-ray images using CNNs, achieving an accuracy of detecting illness with 80% accuracy on a small dataset.

LLM Interaction Web Page

- Led development of a JavaScript based LLM web client using Node.js and express, building a REST api and responsive front-end with real-time chat updates and user authentication, with a PostgreSQL database.

Binary Calculator App

- Developed and deployed SimpliDip on the Apple App Store, guiding the full product lifecycle including UI design, Swift/SwiftUI development, and submission.
- Achieved consistent downloads (~100 sales/year) and positive user feedback.
